

GRIP ADDITIVE

DESCRIPTION

EAGLE GRIP ADDITIVE is a non-hazardous additive that introduces slip resistance to any coating. The material has a low density, allowing it to remain suspended in low-viscosity systems. The rounded particle shape provides easier cleaning and a more pleasant feel on bare feet, which makes this product ideal for pool decks and patios.

FEATURES

- ★ Add to pigmented concrete sealers
- ★ Add to clear concrete sealers
- ★ Add to paver sealer
- ★ Interior applications
- ★ Pool decks
- ★ Patios
- ★ Water-borne or solvent-borne coatings

NOT RECOMMENDED FOR INDUSTRIAL/COMMERCIAL NON-SKID

APPLICATION

Pour the recommended amount (below) into the coating container and mix well. Do not add to first coat of previously unsealed surface. Add to sealer for second coat. Apply the coating per the manufacturer's recommendations. The grip additive will slowly rise to the surface of the liquid coating. Therefore, periodic mixing is recommended to maintain a homogenous mixture. More frequent mixing will be required in low-viscosity systems (mix approximately every 20-30 minutes). If this product is to be used in a sealer applied to new or unsealed surfaces, a base coat of untreated sealer is recommended. This material will decrease the gloss of the cured film.

Technical Data:

Density @ 25°C (g/cc):	0.90	Flash Point:	N/A
Solids by weight:	100%	VOC:	0 g/L
DOT:	Non-hazardous
